Python	Developing CI/CD scripts and tooling.
SolidWorks	2 years of designing new products and maintaining technical documentation.
Other: LLMs, AI Prompting, Postgre SQL, HTML, CSS, Excel, Office, Outlook, Git, Office Scripts, FEM, SolidEdge	

Education

2015	Finite Element Method - CAD/CAE Kielce University of Technology
2016	PM Academy PM Institute
2017	Methods and Tools of PM University of Economics in Katowice
2019	Java Developer Web - Bootcamp CodersLab

Language

English	Full professional proficiency - C1
Polish	Native proficiency

Project highlights

2022–2023 Medical app for Big Pharma

Integrating the technical systems of microservice app for tracking health and activity of caretakers.

Position Software Engineer @ Epam

Technology Java, Kubernetes, Azure

Role I was part of a multinational, cross-functional team working on providing our client with rapidly deployed and prototyped application to revolutionize caretaking market in the US. I worked specifically on communication layer in a scrum team of 10 specialists, while focusing also on empowering my Agile and Scrum skills.

2020–2021 Document workflow App

Maintaining and expanding document workflow application for various clients and government entities.

Position Junior Java Developer @ Asseco DS

Technology Java, Postgres, Javax, JavaScript

Role In a small and agile team of six developers, I worked on both front-end and back-end of the application. I focused on fixing bugs and adding requested functionality based on many requests from our numerous customers. Concentrated on leveling-up my coding skills as this was my first job as a developer.

2016–2017 Managing incorporation of new machines

Improve the technical implementation of an internal business rule engine system.

Position Project Manager @ Coveris

Skills Leadership, Planning,

Role After working as NPD specialist I got promoted to PM. I got training for my new position and began to work on two fronts. One task was to help establish PMO across the company, while, on the other hand, I was given a project to manage. The task was very daunting as the project was initially launched without an oversight. I had to quickly gather knowledge and start organizing cooperation between departments to meet stakeholders' expectations. I discovered several major risks not taken into account, threatening project success and managed to resolve them on a tight schedule. My contribution helped company resolve several bottlenecks and was greeted with success.
